Objective

As an MBA HR student with a strong understanding of recruitment and people management, I bring unique combination of HR knowledge and full-stack development skills. I am a self-taught developer who built and deployed real-world web applications using React, Node.js, and MongoDB. Looking for internship opportunities in web development or HR - Tech where I can contribute both my technical and HR expertise.

Projects

- LinkedIn Clone — Full Stack Social Networking Platform**
Live: <https://linkedin-frontend-ibky.onrender.com> 
GitHub: <https://github.com/sonamver274-sketch/linkedin-frontend> 
Backend: <https://github.com/sonamver274-sketch/linkedin-backend> 
Built a full-stack LinkedIn-inspired social networking platform with secure JWT authentication and HTTP-only cookies. Users can create, like, comment on, and delete posts with a responsive feed. Implemented connection requests, notifications, and real-time-style one-to-one messaging. Developed a job portal where recruiters can post jobs and users can apply, withdraw applications, and filter jobs. Integrated Cloudinary for profile image uploads and optimized the application for mobile and desktop devices. Tech Stack: Next.js 15, React.js, Node.js, Express.js, MongoDB, Mongoose, Tailwind CSS, Zustand, JWT, Cloudinary, REST API.
- JobFlow — Full Stack Job Board Application**
Live: <https://job-board-fr.onrender.com> |
GitHub:https://github.com/sonamver274sketch/Job_Board_Fr
-Built complete job board platform with role-based authentication (JWT)
-Employers can post jobs, view applicants, accept/reject candidates
- Job Seekers can browse, search, apply and track application status
- Deployed frontend and backend on Render cloud platform
- Tech Stack: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, REST API
